

Deluxe Convertible Thermometer

FLOATING USE: Place crown on a flat surface, insert top of thermometer body into the crown base opening while gently pressing downward. The thermometer body will snap into place for a firm connection. Do not remove crown from body once fully attached, as the plastic parts may become loose or break.

SUBMERSIBLE USE: Simply tie cord to eyelet on the top of the thermometer body.

OPTIONAL ANCHOR USE: An anchor is provided to tether the thermometer to pool or spa ceramic tile surfaces. Do not use or affix to vinyl surfaces or damage may occur.

For attachment to ceramic tile surfaces, simply remove backing tape from anchor body and press firmly to a clean, dry area of tile. Place above high water line.

CAUTION: Please be aware, the outer case and clear lens are made of shatter resistant plastic, however, the actual temperature capillary tube is made of glass, and if broken, immediately clean up any broken pieces. The content of the glass tube is not Mercury and is a non-toxic dye.

Also, please be aware that dropping, shaking or any other action may loosen the glass tube from the printed temperature scale and a false reading may occur, in this case the thermometer should be replaced.
